## NEXT GEN

## DPMS Style AR10 Pistol

Proudly built in the USA, the Big Horn Armory AR500 Next Gen Pistol, chambered in 500 Auto Max, carries forward the proud tradition of American firearms innovation and craftsmanship. Precision-engineered for performance, the AR500 Pistol features stainless steel barrels that are meticulously machined and surface-hardened to Rc82 through our advanced Nitride treatment, ensuring exceptional downrange accuracy and unmatched durability in the field.

The 500 Auto Max is a rimless variant of the 500 S&W Magnum, offering identical ballistics and capable of reliably cycling and firing most 500 caliber projectiles ranging from 200 to 700 grains. The rifle is equipped with an adjustable gas block, allowing for subsonic operation when used with a suppressor. The 10-inch barrel, threaded at 3/4"x28 TPI to accommodate most 50 caliber muzzle devices, comes standard with a tank-style muzzle brake.

Built on a DPMS-pattern AR10 platform, the AR500 Pistol operates via a gas system and utilizes 7-round box magazines. It comes equipped with a match-grade trigger for consistent pull weight and rapid reset. The rifle also features an ambidextrous bolt release for enhanced usability by left-handed shooters. To reduce weight without compromising strength, the receiver is crafted from aluminum, while all steel components are finished with a combination of Nickel Boron and Nitride coatings for superior corrosion resistance and longevity.

Delivering up to 4,600 foot-pounds of energy at the muzzle with appropriate ammunition, the AR500 Pistol is the most powerful commercially available AR-platform rifle on the market. The AR500 Next Gen is available as a complete firearm or as a standalone upper receiver, which is compatible with most Gen 1 DPMS high-profile AR10 lower receivers.
